## Graphs

### Belgium

Data on happiness taken from [Nation report Belgium](#)  
 Based on responses to 4-step question on life satisfaction  
 Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)  
 Variable code in data file 'Trends in Nations': eqIs4\_be

## Denmark

Data on happiness taken from [Nation report Denmark](#)  
Based on responses to 4-step question on life satisfaction  
Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)  
Variable code in data file 'Trends in Nations': eqls4\_dk

## EU9

Weighted average of the first 9 member nations of the European Union, since 1973.

The weights (derived from population ratio) are as follows:

Belgium	0.037
France	0.215
Germany West	0.234
Ireland	0.015
Italy	0.207
Luxembourg	0.002
Netherlands	0.058
Denmark	0.019
United Kingdom	0.212

Based on responses to 4-step question on life satisfaction

Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)

Variable code in data file 'Trends in Nations': eqls4\_eu9

## France

Data on happiness taken from [Nation report France](#)  
 Based on responses to 4-step question on life satisfaction  
 Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)  
 Variable code in data file 'Trends in Nations': eqls4\_fr

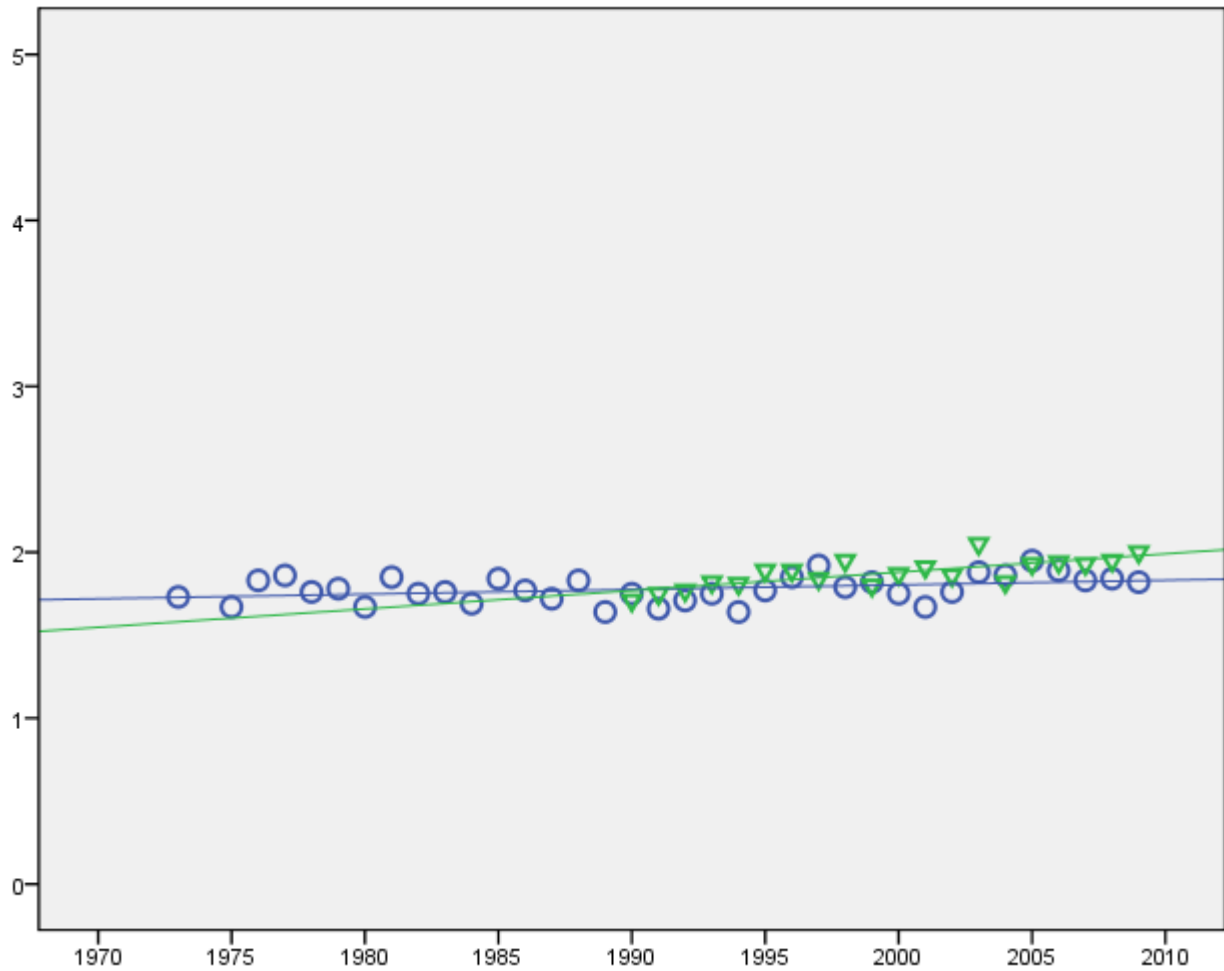

## Germany (since re-union in 1990)

Data on happiness taken from [Nation report Germany](#)  
 Based on responses to 4-step question on life satisfaction  
 Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)  
 Variable code in data file 'Trends in Nations': eqls4\_de

## Germany: Former East (triangles) and West (circles)

Based on responses to 4-step question on life satisfaction

Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)

Variable code in data file 'Trends in Nations': eqls4\_dew and eqls4\_dee

## Greece

Data on happiness taken from [Nation report Greece](#)  
Based on responses to 4-step question on life satisfaction  
Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)  
Variable code in data file 'Trends in Nations': eqls4\_gr

## Ireland

Data on happiness taken from [Nation report Ireland](#)  
 Based on responses to 4-step question on life satisfaction  
 Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)  
 Variable code in data file 'Trends in Nations': eqls4\_ie

## Italy

Data on happiness taken from [Nation report Italy](#)  
 Based on responses to 4-step question on life satisfaction  
 Question code in Item Bank: [O-SLL/u/sq/v/4/b](#)  
 Variable code in data file 'Trends in Nations': eqls4\_it

## Japan

\* Variable code in data file Trends in Nations

## Technical details

1. Happiness assessed by means of surveys in general public samples. This list is based on responses to identical questions on happiness over time.
2. In this ranking the focus is not on the *level* of happiness in the country, but on *inequality* in happiness among citizens.

- Inequality of happiness among citizens in a country can be measured by the dispersion of responses to survey questions. The degree of dispersion can be quantified with the standard deviation. The choice for this statistic is explained in Kalmijn, W.M. & Veenhoven, R. '[Measuring Inequality of Happiness in Nations: In Search for Proper Statistics](#)' Journal of Happiness Studies, 2005, 6:357-396
- An application of this method is reported in; R. Veenhoven, [Return of inequality in modern society? Test by trend in dispersion of life satisfaction across time and nations](#) Journal of Happiness Studies, 2005, 6:457-487

3. The trend lines in this report are based on slightly different questions:

- In the EU nations, happiness was assessed by a single item on life satisfaction: "How satisfied are you with the life you lead?"
  - Very satisfied (4)
  - Fairly satisfied (3)
  - Not very satisfied (2)
  - Not at all satisfied (1)

This question is categorized as type 121B, subtype [O-SLL/u/sq/v/4/b](#).

- In Japan a similar question on life satisfaction was used: "On the whole, are you.. with the life you lead?"
  - Fully satisfied (4)
  - Not fully, but to some extent satisfied (3)
  - As yet unsatisfied (2)
  - Very dissatisfied (1)

This question is categorized as O-SLL/u/sq/v/4/. Three slightly different variants have been used: in 1958-63 version [a](#), 1964-1983 version [e](#) and 1980-1991 also version [O-SLu/c/sq/v/4/f](#) . Since 1992 the question [O-SLW/c/sq/v/4/e](#) is used.

The exact wording of these variants can be found in the item bank.

From 1978 on, the following question has also been used in Japan  
Overall, how satisfied are you with your present life?

- Very satisfied (5)
- Fairly satisfied (4)
- Neither satisfied nor dissatisfied (3)
- Fairly dissatisfied (2)
- Very dissatisfied (1)

This question is categorized as [O-SLW/u/sq/v/5/h](#) and has also been used in slightly different variants O-SLW/c/sq/v/5 ([fc](#), [k](#), [l](#), [r](#)). The exact wording of which can be found in the item bank.

- In the USA happiness was assessed using several slightly different questions about happiness, rated on a 3-step verbal scale (type 111A). The most commonly used question reads:

"Taken all together, how would you say things are these days?

Would you say you are....:

- Very happy (3)
- Pretty happy (2)
- Not too happy (1)

This question is categorized as sub-type [O-HL/c/sq/v/3/aa](#). and O-HL/g/sq/v/3/ variants [a](#), [d](#), [f](#) [g](#), [l](#)

In the USA happiness has also been assessed by means of three other types of questions:

- 2-step life satisfaction, code: [O-SLP/g/sq/2/b](#)
- 4-step happiness, several variants code [O-HL/c/sq/v/4/f](#), [O-HL/g/sq/v/4/b](#) and [O-HL/u/sq/v/4/a](#) and [aa](#)
- 11-step best-worst possible life, code: [C-BW/c/sq/l/11/a](#)

The observed trends in the responses to these latter three questions are mentioned in a separate table below the graph of the trend in 3-step happiness in the USA.

- The full text of these questions can be found in the [Collection Measures of Happiness](#) of this World Database of Happiness
  - The original scores on these questions were transformed linearly to a comparable 0-10 scale.
  - Section 7/3.3.3 of the introductory text provides more detail about the classification of questions and transformation of scores.
4. The variables used here are also described in the codebook of the data file 'Trend in nations', variable [sd-happiness](#).
  5. The highest possible standard deviation on this scale is 5.00, when one half of the population is very happy and the other half unhappy, with no scores in between. The lowest possible score is 0, when all are equally happy (either happy or unhappy).
  6. The regression-coefficient stands for the size of the slope of the linear regression line through the dots (averages) in the time charts. A positive coefficient denotes a rise in inequality in happiness, and a negative coefficient a decline. A regression coefficient of –.01 means 0.01 points decrease of inequality in happiness per year.

7. The observed regression coefficient is based on a sample of assessments of happiness during this era and the coefficient in this sample may differ from the 'true' coefficient. The confidence interval gives an estimated range in which this true coefficient is likely to be included with 95% probability.
8. This trend report limits to time series of at least 20 years involving 10 or more comparable data points.
9. The data are recorded in the SPSS file [Trends in Nations](#), which is available on request.
